

GNET is **MundiWare's** cross-platform Publishing System conceived specifically to the editorial publishing industry. It includes integrated tools for edition creation, page make-up, text editing and content management.

It is compatible with standard PC computers, with either Linux or Windows, and does not require expensive and complex hardware configurations.

GNet
Publishing System

Advantages:

The pagination module is based on InDesign CS3.

Organizes the workflow of information and allows better management of all production environment.

Stories produced in text editor module may be composed along with their geometry, in the same way as they appear in the pagination module. In this way, GNET eliminates the need to fit texts into frames on the page that typically represents a production bottleneck.

Supports both text- and layout-oriented workflows.

Allows multiple users to work on the same page simultaneously, increasing productivity and reducing deadline time.

Last minute changes in page layout can be easily handled because the pagination module alerts the text editing modules of page changes.

Optimizes both human and material resources available in the Newsroom.

We believe that **MundiWare's** success is the result of the expertise of its professionals and the strong sense of partnership established with its customers.
